

# Package: feck (via r-universe)

June 1, 2026

**Type** Package

**Title** Forward Error Correction and Erasure Coding

**Version** 1.0.0

**Maintainer** Mike Cheng <mikefc@coolbutuseless.com>

**URL** <https://github.com/coolbutuseless/feck>

**BugReports** <https://github.com/coolbutuseless/feck/issues>

**Description** Forward error correction and erasure coding. Repair damaged files using pre-generated repair blocks.

**License** MIT + file LICENSE

**Encoding** UTF-8

**RoxygenNote** 7.3.2

**Suggests** testthat (>= 3.0.0)

**Config/testthat/edition** 3

**Copyright** See 'inst/COPYRIGHTS' file for original license for included code from 'zfec'

**Repository** <https://coolbutuseless.r-universe.dev>

**Date/Publication** 2025-04-06 11:04:39 UTC

**RemoteUrl** <https://github.com/coolbutuseless/feck>

**RemoteRef** HEAD

**RemoteSha** b5ae3f841219ca819896eb6e9b39bd1dfcf8d78e

<b>Index</b>	<b>6</b>
--------------	----------

---

chiblihash64	<i>Calculate the 64-bit chibli hash for the given data</i>
--------------	--

---

**Description**

Calculate the 64-bit chibli hash for the given data

**Usage**

```
chiblihash64(raw_vec, skip = 0, len = length(raw_vec))
```

**Arguments**

raw_vec	raw vector
skip	number of bytes to skip at start
len	Number of bytes to hash

**Value**

String containing the chibli hash

**Examples**

```
zz <- as.raw(1:100)
chiblihash64(zz)
chiblihash64(zz)
zz[1] <- as.raw(199)
chiblihash64(zz)
```

---

fec_prepare_file	<i>Create blocks for a file</i>
------------------	---------------------------------

---

**Description**

Create blocks for a file

**Usage**

```
fec_prepare_file(  
  filename,  
  blocks_filename = NULL,  
  k = 10,  
  n = 2,  
  verbosity = 0L  
)
```

**Arguments**

filename	filename
blocks_filename	Default: NULL, suffix with ".feck"
k	number of chunks to split data into. Larger 'k' will mean the file will be chunked into more, smaller blocks. This will help isolate errors, but can increase computation time.
n	number of repair chunks to create. Each repair chunk will be able to repair one bad chunk in the data.
verbosity	Default: 0

**Value**

Invisibly return the raw vector of repair blocks

---

fec_prepare_raw	<i>Create recovery blocks</i>
-----------------	-------------------------------

---

**Description**

Create recovery blocks

**Usage**

```
fec_prepare_raw(raw_vec, k = 10, n = 2, verbosity = 0L)
```

**Arguments**

raw_vec	raw vector
k	number of chunks to split data into. Larger 'k' will mean the file will be chunked into more, smaller blocks. This will help isolate errors, but can increase computation time.
n	number of repair chunks to create. Each repair chunk will be able to repair one bad chunk in the data.
verbosity	Default: 0

**Value**

Raw vector of meta-data and recovery blocks

**Examples**

```
set.seed(1)
dat <- as.raw(sample(0:255, 1e3, replace = TRUE))
rblocks <- fec_prepare_raw(dat, verbosity = 1)
```

---

fec_repair_file	<i>Repair file</i>
-----------------	--------------------

---

### Description

Repair file

### Usage

```
fec_repair_file(filename, blocks_filename = NULL, verbosity = 0L)
```

### Arguments

filename	filename. Repaired file will have suffix ".repaired"
blocks_filename	Default: NULL, suffix with ".feck"
verbosity	Default: 0

### Value

Invisibly return a raw vector of the contents of the repaired file. If repair is not possible, an error will be raised.

---

fec_repair_raw	<i>Recover damaged data in a raw vector</i>
----------------	---

---

### Description

Recover damaged data in a raw vector

### Usage

```
fec_repair_raw(raw_vec, blocks, verbosity = 0L)
```

### Arguments

raw_vec	raw vector
blocks	raw vector of recovery blocks as created by <a href="#">fec_prepare_raw()</a>
verbosity	Default: 0

### Value

Repaired data, or NULL if repair not possible

### Examples

```
set.seed(1)
dat0 <- dat <- as.raw(sample(0:255, 1e4, replace = TRUE))
rblocks <- fec_prepare_raw(dat, verbosity = 1)
# simulate damage to data
dat[1:100] <- as.raw(0)
identical(dat, dat0)
dat_repaired <- fec_repair_raw(dat, rblocks, verbosity = 1)
identical(dat_repaired, dat0)
```

---

print.fec\_blocks      *Print repair blocks*

---

### Description

Print repair blocks

### Usage

```
## S3 method for class 'fec_blocks'
print(x, ...)
```

### Arguments

x	Repair blocks created by <a href="#">fec_prepare_raw()</a>
...	ignored

### Value

None

### Examples

```
rblocks <- fec_prepare_raw(as.raw(1:1000))
print(rblocks)
```
